

Live Webinar

“7 Application Tips to improve your Decalcification process”

Wednesday 30th September 2020

Two time sessions

9:00am and 4:30pm GMT+02

REGISTER NOW

Decalcification is a histological technique which is practiced worldwide. Whether you work in hospital or private laboratory, when you receive bones to be decalcified, you know what to do: place your fixed bone in a container with a decalcification solution and just wait until the decalcification process is completed.

However, if you aim at obtaining great morphology, optimized molecular results, and same-day diagnosis, there are some *tips* you need to learn! Join our Webinar *“7 Application Tips to improve the Decalcification process”* on **30th September** and learn the best practices on decalcification, including:

- how to fasten decalcification time
- how to control and standardize protocols
- how to preserve RNA and DNA quality
